Testimony: In OPPOSITION of *SB 457 Vaccine Information System digital registry bill*

Dear Chairmen and Members of the Public Health Committee,

This goes against our Rights, Liberties and Privileges' set forth in the [Connecticut Constitution](#) and more specifically against the [Fourth Amendment](#) of the US Constitution: *Undo search and seizure* - record keeping of individuals is not Freedom.

Specific issues:

- The immunization registry is now extended to *everyone*, not just those under first grade. Nothing in the language suggests that knowledge of vaccine status is somehow limited to nurses and kids, high schoolers, or university students;
- ZERO details are given on how to decline enrollment in such a registry;
- The authors of the bill failed to include any language whatsoever on industry standard cyber-security SSL or AES protocols for the registry itself; VCI (see below) purports to have limited information on health ID cards but this is an empty claim;
- This bill is the beginning of a global implementation of Smart Health Cards (aka vaccine passports, digital ID, ID2020, etc). Many in CT and certain legislators are keenly aware of this global health system --- if you are not, the links here are brief and informative: [here](#), [here](#) and [here](#) (more detail).

Should not this bill be before the Judiciary as well? It clearly is not a Public Health bill in our knowing of the facts of Covid. Will forward to members of that committee, as well.

I urge you to vote NO on SB 457.

Sincerely,

Anne Manusky, M.Ed.
President
